

No.	DOST Attached Agency	Proposed Use Case/Areas for Collaboration	Domain
1	Philippine Institute of Volcanology and Seismology (PHIVOLCS)	Handa Integrated Platform for Preparedness and Response Integrates hazard, exposure, and vulnerability data across agencies, enabling secure, real-time, and interoperable data exchange. It includes all-hazard assessments, automated planning tools, centralized advisories, and an AI assistant—providing data-driven decision support for disaster preparedness, response, and climate resilience.	Disaster Risk Reduction and Management
2	Philippine Atmospheric, Geophysical and Astronomical Services Administration (PAGASA)		
3	Science Education Institute (SEI)	Geospatial Education Investment and Outcomes Dashboard Integrated geospatial dashboard that visualizes SEI scholarship coverage and financial investments alongside socio-economic and health outcome indicators (malnutrition, stunting) and regional economic performance. The dashboard enables evidence-based assessment of regional equity, identification of underserved areas, and strategic resource allocation.	Health/Nutrition/Education
4	Philippine Science High School System (PSHSS)	Geo-Enabled PSHSS Executive Planning Dashboard Integrated geospatial dashboard that visualizes applicant distribution, scholar enrollment, graduate outcomes, service accessibility, infrastructure coverage, and other key operational indicators across geographic areas. The dashboard will support evidence-based assessment of service reach, identification of geographic patterns and service gaps, and strategic planning for admissions, outreach, resource allocation, student development, and institutional planning.	
5	Industrial Technology Development Institute (ITDI)	OneLab Enhancement Enables geospatial visualization of hazard exposure, service coverage, facility utilization, and client demand patterns to identify underserved and high-demand areas, support evidence-based decision-making, and optimize resource allocation and service delivery.	Geospatial Infrastructure Development
6	Metals Industry Research and Development Center (MIRDC)	Geo-Enabled MIRDC Services Intelligence Dashboard Integrated geospatial dashboard that visualizes MIRDC service coverage, facility utilization, and client demand patterns across geographic areas. The dashboard will support evidence-based assessment of service reach, identification of underserved or high-demand areas, and strategic planning for resource allocation and service delivery optimization.	
7	Forest Products Research and Development Institute (FPRDI)	Service Mapping Generate a centralized mapping mapping data that can visualize the location of the laboratory offering services related to pulp and paper testing, and mapping of the location of the industries availing the services to enhance decision-making capabilities in specific areas where there is a demand for certain service.	
8	Philippine Textile Research Institute (PTRI)	PTRI Hubs and Resources Hazard Assessment Enables geospatial visualization of hazard exposure, service coverage, facility utilization, and client demand patterns to identify underserved and high-demand areas, support evidence-based decision-making, and optimize resource allocation and service delivery by integrating PTRI facility and textile resource data with hazard datasets for spatial analysis and risk assessment.	

No.	DOST Attached Agency	Proposed Use Case/Areas for Collaboration	Domain
9	Philippine Nuclear Research Institute (PNRI)	• PhilDose Nationwide Radiation Dose Mapping – geospatially visualize radiation dose data of facilities and occupationally exposed workers to identify high-risk areas, detect exposure patterns, support regulatory oversight, and strengthen emergency preparedness and inter-agency coordination. • Environmental Radiation Heatmaps – consolidate fragmented environmental radiation monitoring datasets into a unified geospatial platform to generate nationwide heatmaps, improve data accessibility and standardization, and support evidence-based policy and risk assessment. • Mercury Hotspot Mapping – develop a geospatial database and visualization of mercury concentrations in soil and sediments to identify contamination hotspots, enable spatial analysis, support targeted interventions, and enhance environmental monitoring and regulatory planning.	Environmental Monitoring
10	Philippine Council for Industry, Energy, and Emerging Technology Research and Development (PCIEERD)	Inter-Agency Project Management Module Develop an integrated, geospatially enabled platform that consolidates R&D projects, Grants-in-Aid (GIA), Non-GIA initiatives, collaborations, and research outputs across participating DOST councils and agencies - TAPI & NRCP. The platform supports centralized monitoring, inter-agency coordination, strategic planning, and decision-making through dashboards, geospatial analytics, collaboration mapping, and AI-assisted information services. It also aims to identify overlapping initiatives, analyze research gaps and regional opportunities, strengthen system interoperability, and provide stakeholders with AI-enabled guidance on GIA processes and requirements.	Project and Knowledge Management
11	Philippine Council for Health Research and Development (PCHRD)		
12	Philippine Council for Agriculture, Aquatic and Natural Resources Research and Development (PCAARRD)		
13	National Research Council of the Philippines (NRCP)		
14	Technology Application and Promotion Institute (TAPI)		
15	Food and Nutrition Research Institute (FNRI)	Technical Assistance (AI and analytics)	
16	Science and Technology Information Institute (STII)	Technical Assistance (Computing, storage, and AI)	
17	Advanced Science and Technology Institute (ASTI)	Data sharing; Data Governance; Technical Collaboration	
18	National Academy of Science and Technology (NAST)	Technical Assistance (Database Development)
